SUMMARY

Full-stack developer completing a BS+MS in Software Engineering through WGU's Accelerate-to-Masters program. Builds and ships complete, production-deployed applications independently — spanning healthcare, logistics, and education — including data modeling, backend APIs, frontend interfaces, payment integration, and VPS deployment. Brings four years of systems analysis and cross-functional problem-solving from a healthcare operations background. Seeking a junior or entry-level software development role.

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML/CSS, SQL

Frameworks & Libraries: Django, Django REST Framework, React

Tools & Platforms: Git/GitHub, Linux/WSL, Nginx, Gunicorn, VS Code, Stripe API, ReportLab, PostgreSQL, SQLite

Concepts: REST API design, relational database design, VPS deployment & server administration, debugging, CI/CD exposure

AI-Assisted Development: Claude, GitHub Copilot, Google Gemini — used for prompt-driven prototyping, debugging, and iterative development

FEATURED PROJECTS

LocalDoc (rebranding to ProxiCura) — Healthcare Access Platform — *Django, React, PostgreSQL, Stripe*

- Independently designed and built a full-stack doctor-discovery platform, integrating federal NPPES registry data with a custom provider verification and review system.
- Implemented live Stripe payment processing with promo-code support and built a provider-facing signup and dashboard flow.
- Configured and managed production deployment on a self-administered VPS (Nginx, Gunicorn, PostgreSQL).

CCLS Intranet — Logistics Operations Platform — *Django, SQLite, ReportLab, Nginx*

- Built and deployed an internal operations portal for a freight logistics company, including a call-tracking system, carrier onboarding workflows, and a Django admin interface with automated status logic.
- Developed a dynamic e-signature dispatch agreement system that generates formatted PDF packets via ReportLab.
- Owned the full deployment lifecycle — server configuration, Gunicorn/Nginx setup, and ongoing production maintenance.

Robot Word Block Simulator — Educational Tool — *JavaScript, HTML/CSS*

- Built a browser-based, drag-and-drop robot programming simulator modeled on SPIKE Prime's block interface, supporting multiple mission-based coding challenges.
- Designed the accompanying 10-session curriculum, “From Explorers to Engineers,” bridging block-based robotics to Python for students ages 8–10.

Freight Dispatch Academy — Interactive Training Platform — *PowerPoint, Instructional Design*

- Designed a 22-slide gamified onboarding curriculum for new freight dispatch agents, with embedded knowledge checkpoints and a scored final mastery assessment.
- Reduced onboarding dependency on senior staff by building a self-paced, standalone training resource.

PROFESSIONAL EXPERIENCE

Optum Health — WellMed Network Ops, Sr. Reworks Claims Examiner *Feb 2025 – Present*

- Investigate and resolve complex system discrepancies by analyzing expected vs. actual outcomes.
- Create detailed ServiceNow tickets documenting system issues, expected logic, and reproduction steps — mirroring engineering bug-reporting workflows.
- Collaborate with cross-functional teams to identify root causes, validate fixes, and ensure accurate reprocessing.

WellMed Medical Management — Sr. Claims Examiner *Jan 2022 – Feb 2025*

- Analyzed Medicare Advantage claims for accuracy, compliance, and system alignment with CMS regulations.
- Coordinated with multiple departments to update provider contracts, pricing, and authorization logic.
- Performed quality audits and maintained production reports to ensure data integrity.

Youth Robotics & Programming Coach *Aug 2021 – Present*

AmeriCorps VISTA, Aug 2021 – Apr 2022; continued as an independent Saturday program, Apr 2022 – Present

- Coach a weekly robotics and programming program for youth ages 6–10, teaching fundamentals, debugging, and iterative problem-solving.
- Rebuilt the program's 10-session curriculum from the ground up after the original materials were lost, and authored all accompanying technical training content.
- Built a custom browser-based robot simulator to give students hands-on programming practice between in-person sessions.

CONTINUING EDUCATION & TECHNICAL PRACTICE

- Completed hands-on cybersecurity and Linux labs through HackTheBox and TryHackMe.
- Completed the IBM Data Science Professional Certification, including Python data analysis and introductory machine learning projects.

EDUCATION & CERTIFICATIONS

- **BS Software Engineering** (in progress) — Western Governors University, 2025–Present
- **Google Analytics Professional Certification** (in progress) — 2026
- **A.S. IT & Web Development** — University of Phoenix, 2011
- **IBM Data Science Professional Certification** — Coursera, 2020–2021
- **SAS 9.4 Base Programming Certification** — IVMF, 2020
